

"I have been a denture patient for 28 years and have never been able to eat my favorite foods until now! My ABC™

dentures are fantastic, you can't even see the cutter bar. Nobody can tell I have them!"

Marjorie Hopkins

"I have been prescribing the cutter bar teeth on my patients for 22 years. Because of the ABC's™ my patient referrals have increased.

I have been wearing the cutter bar teeth in my own mouth for 20 years. During this time I have used a number of different teeth. The ABC™ teeth are the most user friendly, self adjusting teeth available and the most efficient teeth made for chewing and cutting your food. I think ABC's™ are the best teeth available for dentures."

Dr. Boyd Harris

- ◊ Patients eat meat, lettuce, nuts and fruit without fear
- ◊ Over 22,000 sets delivered since 1981

"Thanks to my new ABC's™ dentures, vegetables are no problem.

I feel great."

Ron Davis

"With my new ABC's™ dentures, I can go to my favorite restaurant and eat steak without worry. I can eat anything I want."

Robert Wombwell

More about ABC's™

Auto Balancing Cutters™ (ABC's™) are flat plane, composite, posterior teeth. ABC's™ have a distinct advantage over normal flat plane teeth. The lower posteriors on ABC's™ have a **surgical stainless steel bar** running from the first bicuspid through the first molar. This stainless steel bar enables the patient to cut through food like a knife on a cutting board. The bar is also perforated for mechanical retention.

ABC's™ can be used on conventional and most implant supported dentures. ABC's™ have a non interfering occlusal plane which greatly reduce lateral forces on implants.

ABC's™ are available in a wide range of shades to custom match all needs.
